

```

class Customer {
    private String firstName;
    private String lastName;
    private BankAccount account;

    public Customer(String firstName, String lastName) {
        super();
        this.firstName = firstName;
        this.lastName = lastName;
    }

    public String getFirstName() {
        return firstName;
    }

    public String getLastName() {
        return lastName;
    }

    public BankAccount getAccount() {
        return account;
    }

    public void setAccount(BankAccount account) {
        this.account = account;
    }

    @Override
    public String toString() {
        return String.format("이름: %s %s, 잔고: %,d원",
firstName, lastName, account.getBalance());
    }
}

```
